## **INTRODUCTION**

The aim of the seminar paper, the choice of the topic or problem to be solved, the outline of the seminar paper procedure, the choice of tools for solving the problem, etc.

# **1 NOTES ON THE SEMINAR PAPER**

## **1.1 MS-Word**

Basic video help is available on the official Microsoft website:  
<https://support.microsoft.com/en-us/word>.

## **1.2 Structure and formats**

Make sure your paper style is consistent, uniform, using a single style of numbered and unnumbered bullets. When writing, use the predefined styles:

- Body text – for the basic style of text paragraphs.
- No Spacing – space-saving style for tables.
- Heading 1
- Heading 2 - don't unnecessarily segment the text.
- Heading 3 – don't unnecessarily segment the text; use it except for large-scale seminar papers.
- Subtitle – use it for better clarity and structure of the text - the heading will not be part of the automatically generated content.
- Quote - for direct quotes in the text.
- Source - style for listing the source under the embedded objects.
- References - style for citation sources: list format.

### ***CONTENT***

The content is generated automatically. Update content: right-click and select: "Update field".

### ***EMBEDDED OBJECTS***

Table and graph captions need to be placed above the object and below the object with the source designation. If you have created a graph or table during the processing of the seminar paper (you are the author), state in the source: "Source: own."

### ***REFERENCES***

The method of citing and creating publication sources is described in the Dean's Instruction No. 02/2020.
